

Political connections of procurement tender winners and losers across Hungarian cities

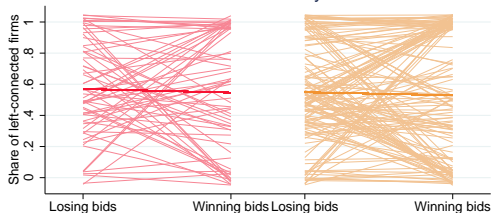

1998 election cycle

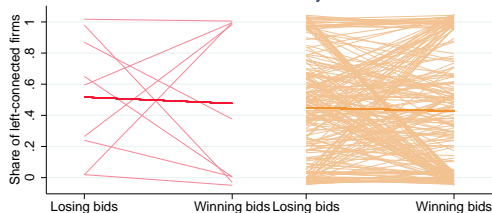

2002 election cycle

2006 election cycle

2010 election cycle

Left-leaning cities

Right-leaning cities

Each line represents a procuring city in a given election cycle. A left-sloping line indicates that, in that city, left-connected firms are more frequent among winners than among losers.

A right-sloping line indicates that, in that city, right-connected firms are more frequent among winners than among losers. Thick lines are unweighted averages across cities.
